AN IMPORTANT DECISION.

ra Power company, a public utility owned what is apparently a power site of 320 acres on Owens river The city of Los Angeles brought condemnation suit in the federa court and has obtained a decree of condemnation covering the land dam and power plant of 4000 horse power, of a value estimated to be \$1,125,000

We are not now concerned with the equities of this particular case but the legal principle involved, so for as can be gathered from the brief disnatch seems to be of the very highest importance, making it desirable that the case be carried to

the court of last resort The question in which the public is concerned is not that between Los Angeles and the power company, but munity served by the power com pany. From all that appears in the disnatch a community somewhere in the state and far from Los Angeles may be deprived of a power service which it now enjoys in order that Los Angeles may have more power than it low has In what way the federal court obtained jurisdiction of the case is not stated.

Apparently Los Angeles has under the decision the legal right to acquirby condemnation the property of the utility company which supplies current to operate our municipal street railroad, thus compelling travelers by these lines to go afoot or hire a

Or, if a court should decide that we need power worse than our southern friends and refuse to condemn then it would be deciding an administrative question not properly be--m'ner to a court.

The attorneys of municipalities broughout the state should look matter-San Francisco Chronicle

TET PURBLO

BE A LESSON Dinasters like that which has befallen Pueblo are due to the want of precaution on the part of man. Colorado is a dry land, but any one he: knowledge of the great arid

tion and proposals. By training, the engineer is strong for efficiency; the detection of waste is with him almost an obsession.

But it was hardly to be expected we are to judge by the findings givat on out recently by the vice-chaira.oe man of the committee which for months has been conducting a nation-wide inquiry into waste. The public was prepared for a report on waste in lumber of big iron, and in methods of handling these. A comparison of steam power as against electric or water power; a study of region of the west is aware that the the loss in labor turnover or in du plicating needlessly certain mechani cal operations-these things we expected from the engineers on the job of investigating. For this reason the findings are astonishing

"In the manufacture and sale of ladies' shoes and millinery," says the report, "there is a great waste quent changes. The woman will earnestly insist that she would be content to wear last year's dress I it were not out of style

Other reports will of course follow and these may give us more hope than does this one that the total amount of waste in this country may be reduced as a result of these investigations. But it seems struck a snag which they might have seen even without an investigation Perhaps if these worthles had regarded their own wearing apparel, they might have learned how anch of waste is contributed by the demands of fashion. They might have experienced, too, an unwilingness on their own part to run center to fashion's edicts.

Undoubtedly this report, when it eaches headquarters, will be laid on the table indefinitely. When the engineers get back to the subject of mechanical processes and machine operations, they may contribute amothing more valuable to the subfeet of elimination of waste in in
